# Development of the Group in 2012

---

In 2012, the Group's operations were mainly driven by the following factors:

- Economic slow-down in European Union countries and debt repayment problems of some euro zone countries. According to preliminary data of the Central Statistical Office (GUS) at January 2013, GDP growth in Poland was 0.1%.
- Due to a strong and recognizable brand on the international market, WSE has become a first-choice market for investors.
- Solid base of local institutional investors was an important element supporting the development of the Group.
- Following the acquisition of Polish Power Exchange, the WSE Group consolidated the national electricity market.
